SILENT PUSH

PREEMPTIVE CYBER INTELLIGENCE

WITH INDICATORS OF FUTURE ATTACK

EXPOSE HIDDEN INFRASTRUCTURE TO PROACTIVELY PROTECT ENTERPRISES

Silent Push provides preemptive threat intelligence revealing adversary infrastructure as it's created using our Indicators of Future Attack (IOFA). Organizations quickly block attacks and defend against the known global threats and most importantly, proactively address what is lurking in the unknown.

100%
FIRST PARTY DATA

collected across the internet for over 5 years by Silent Push. Our timely and accurate datasets deliver a complete view driving operational efficiency and immediate action.

INDICATORS OF FUTURE ATTACK (IOFA)

Real-time, actionable, preemptive indications of attacker behavior and intent create a unique threat actor digital fingerprint.

1. Identify a group of behaviors and TTP

2. Turn into searchable attributes

3. Obtain a complete view of threat landscape

4. Stop known and unknown threats

OUR SOLUTIONS

PREEMPTIVE INTELLIGENCE

Leverage our IOFA feeds and TLP reports to reduce the growing risk of AI augmented attacks and avoid being exploited. Anticipate future threats and preemptively create a defense with intelligence and enrichment that predicts attacks before they're launched.

PROACTIVE THREAT HUNTING

Deploy a cyber early warning system and spend less time sifting through noisy alerts. We collect, cluster, and enrich global IPs and domain data providing an attacker fingerprint of their malicious behavior so you can detect emerging threats and swiftly defend your organization.

UNCOVER BRAND IMPERSONATION

Protect your brand and supply chain with automated spoofing and phishing prevention that tracks hidden and known domains masquerading as your own. Execute powerful content-based queries that target on-page data, as well as DNS similarities.

46%

THE SILENT PUSH DIFFERENCE

- **Know First with IOFAs**
Preemptively discover hidden threat infrastructure and better monitor known attacks using our unique IOFAs, in real-time to avoid loss.

- **Build TTP-led Cyber Defense**
Target the underlying Tactics, Techniques and Procedures (TTPs) to locate pre-attack threat infrastructure, instead of relying on stale IOCs.

- **Evaluate Attackers' Digital Fingerprints**
Identify threats using traceable fingerprints that reveal adversary activity related to specific attack vectors, to prevent a breach.

- **Action Ready-made Intelligence**
Obtain clear, accurate and immediate context about unknown threats to make more informed, timely decisions in critical situations.

ABOUT US

Silent Push provides preemptive cyber intelligence exposing threat actor infrastructure as it's being set up. Our Indicators of Future Attack (IOFA) act as an early warning system to defend against threats. We go beyond stale IOCs and create a unique digital fingerprint of adversary behavior enabling you to proactively block hidden attacks before they're launched.
